

Аркадий Яковлевич Нейман

13 августа 1945 - 29 сентября 2014

29 сентября 2014 года ушел из жизни доктор химических наук, Почётный работник высшего профессионального образования Российской Федерации, профессор кафедры неорганической химии Уральского федерального университета Аркадий Яковлевич Нейман.

Аркадий Яковлевич родился 13 августа 1945 года в Свердловске. В 1971 окончил химический факультет Уральского государственного университета. В 1975 году после окончания аспирантуры при кафедре физической химии защитил кандидатскую диссертацию, а в 1989 году - докторскую диссертацию на тему «Явления электро- и массопереноса и сопряженные процессы в сложных кислородных соединениях с амфотерным характером проводимости». В 1991 ему было присвоено ученое звание профессора. Работал в Уральском университете с 1972 года: младший научный сотрудник (1972–1974), старший научный сотрудник (1974–1978), ассистент (1978–1981), доцент кафедры неорганической химии (1981–1991), заведующий кафедрой (1995–2014). Благодаря его творческой активности и стремлению передать студентам самые современные знания и передовые научные взгляды, на кафедре уделялось много внимания модернизации лекционных курсов и привлечению к учебному процессу ведущих ученых Академии Наук. Аркадий Яковлевич лично впервые разработал лекционные курсы «Термодинамика и строение конденсированных сред», «Ионика расплавов и твердые тела», «Поверхностные и межфазные явления», «Высокотемпературная электрохимия». Многие поколения студентов запомнят А.Я. Неймана как блестящего лектора, его артистизм и умение донести сложное в доходчивой форме позволяли сделать слушателей своими единомышленниками и соучастниками творческого лекционного процесса. В 1998 году по инициативе А.Я. Неймана в рамках программы «Интеграция» в университете был создан научный центр «Неорганическая химия и новые материалы». При его консультировании и руководстве защищены 1 докторская и 7 кандидатских диссертаций.

Основные научные результаты А.Я. Неймана связаны с исследованием высокотемпературного переноса заряда и массы в оксидах и механизмов твердофазных реакций. Им обнаружены и исследованы неизвестные ранее явления: нефарадеевское поведение твердофазных реакций; явление индуцированного электрическим полем переноса заряда и массы через эвтектические интерфейсы; метакомпозиты – как новый класс электролитических композитных материалов; явление твердофазной электрокапиллярности; полианионный перенос заряда и массы в вольфраматах и молибдатах различной природы; спонтанное и индуцированное электрическим полем диспергирование оксидов, твердофазное растекание высокотемпературных оксидов; новый класс протонных проводников. Им были разработаны теоретическая модель современного кооперативного переноса кислорода и многовалентных металлов, электрохимический подход к твердофазным реакциям и межфазным транспортным процессам. А.Я. Нейман - создатель нового метода термохимической обработки оксидных монокристаллов для квантовой оптики и высокотемпературной электрохимии, метода диффузионной сварки для получения многочастотных лазерных элементов.

А.Я. Нейман стажировался в Университете Осло (Норвегия, 1997). Неоднократно работал в качестве приглашенного профессора и читал лекции в университетах Франции, Норвегии, Германии. Был членом Российского бюро Международного общества ионики твердого тела, Электрохимического общества, экспертного совета Российского фонда фундаментальных исследований; директором-координатором центра «Экологические технологии»; членом координационных советов программ «Университеты России – фундаментальные исследования», «Трансфертные технологии», «Поддержка наукоемкого бизнеса в высшей школе». Входил в диссертационный совет при Институте высокотемпературной электрохимии УрО РАН.

Награжден медалью «20 лет победы в Великой Отечественной войне» (1965) .
