

Виктор Витальевич Тугушев

(1954 г. - 01.10.2017 г.)

На 64 году жизни скоропостижно, в результате несчастного случая, ушел из жизни доктор физико-математических наук, профессор, Виктор Витальевич Тугушев.

В. В. Тугушев — известный физик-теоретик в области физики конденсированного состояния. Один из создателей теории тороидного упорядочения в твердом теле, теории несоизмеримых структур

в слабых зонных магнетиках, теории магнитного и зарядового упорядочения в сплавах и сверхрешетках на основе разбавленных магнитных полупроводников.

В последнее время успешно занимался теорией квантовых явлений в полупроводниковых наноструктурах на основе топологических изоляторов, в частности, такими интересными новыми явлениями

как квантовый аномальный и спиновый эффекты Холла, насыщение ИК-поглощения ультратонкими пленками топологических изоляторов.

Автор более 170 научных работ в рецензируемых российских и зарубежных изданиях. Ветеран атомной энергетики и промышленности.

В лице Виктора Витальевича мы потеряли очень талантливого, эрудированного, честного и отзывчивого ученого.

Светлая память о нем навсегда останется с нами.

Выражаем искренние соболезнования семье и близким Виктора в связи с такой тяжелой утратой.
